   Method of Pre-germination
   ▶ Put washed brown rice in an appropriate container, pour sufficient amount of water to soak the rice.
   ▶ Pre-germination shall not exceed 16 hours. Make sure to rinse the rice clean with flowing water before using “GABA” menu. Be careful not to rinse too much or else the embryos that are required to germinate may wear off.
   ▶ Unique smell may be generated according to the soaking time of pre-germination
   ▶ When pre-germination has been completed, wash the rice and insert the inner pot. Pour appropriate amount of water and use “GABA” menu.
   ▶ During summer or hot temperature environment, an odor may be generated. Reduce germination time and wash clean when cooking.

2 GABA RICE cooking feeds up to 6 people.
3 City water can be used for germination. However, filtered or drinkable water is recommended. Germination may not be properly performed in hot or boiled water even after cooking.
4 Germination rate and germ growth may differ by the type of brown rice, condition, or period of storing.
   - The brown rice should be within 1 year from harvest, and not long since pounded.
5 In GABA mode, preset on 3H may not be possible. If you want to preset the GABA, set up BROWN RICE menu .
6 The taste of rice could be different depending on a kind of brown rice. Use customized taste function or control the amount of water for your taste.
7 Depending on the user’s environment or the condition of the rice, the sprout may not be visible.

Precautions for PRESET / PRESET REHEATING Cooking

1 Precautions for Preset Cooking

▶ If the rice is old and dry, the result may not be good.
▶ If the rice is not well cooked, add more water by about half-scale.
▶ If the preset time is longer, melanization could be increased.
▶ Washed rice has a lot of settled starch, and crust can be made in case of preset cooking.
   If you wash the washed rice in running water before cooking or make the quantity of rice small, the crust will be less.

2 Precautions for preset reheating

▶ When leaving cooked rice at ambient temperature for a prolonged period of time, moisture is evaporated from cooked rice. In such a case, the reheating preset may cause dehumidifying or melanosing (slightly burnt) of cooked rice.
▶ If there is an excessive amount of cooked rice in the pot, it may not sufficiently be reheated.
   It is recommended to set reheating for no more than 5 people. (approx. half of the inner pot)
▶ Reheating of cold- or frozen-stored cooked rice may cause insufficient heating, dehumidifying or melanosing (slightly burnt) after completion of reheating.
▶ Put cold-stored cooked rice into the inner pot, beat rice with a scoop, and then reheat rice.
▶ Reheating of frozen-stored cooked rice shall be performed only after thawing the rice.

3 Changing preset time.

▶ Press ‘CANCEL’ button for more than 0.3 seconds and restart it to change the preset time.

4 If the preset time is shorter than available range.

▶ If the preset time is shorter than the available range, cooking/reheating will begin immediately.

5 In case the preset time is over 13 hours.

▶ “13Ho” will be displayed and the preset time will be changed to 13 hours automatically. If cooking is preset to AM07:00 of the following day at PM5:00 of the day, where preset time is 14 hours, “13Ho” will be displayed, and preset time automatically changes to AM06:00. (Maximum preset time is 13 hours)

※ If the preset time is over 13 hours, it can cause bad smell and discoloration.
   The limited preset time is set up to be under 13 hours because the rice spoils easily during the summer time.
※ When you want to finish presetting at 12:00 p.m., preset the time to be 12:00 p.m.
※ Use this function when you want to finish cooking between 1 hour to 13 hours after the current time.
※ During the preset cooking, if you want to check the current time, press the SET/MODE button.
   Then, the current time will appear for about two seconds.
